

How to rotate a picture!

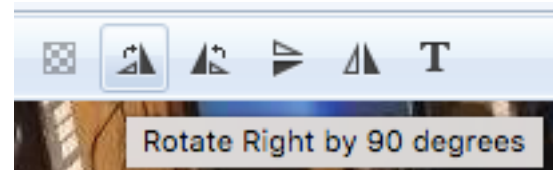

This is by far the most annoying thing, and I have not found a way around it.

- Go to page you'd like to add an image to.
- Turn Design mode **ON**
- Click into a content panel like you would to edit the text.
- Click on the Image Manager Icon (see right)
- Upload a picture by pressing the Green Plus Sign
- Choose the picture that undoubtedly uploaded incorrectly.
- Choose Image Editor (above picture)

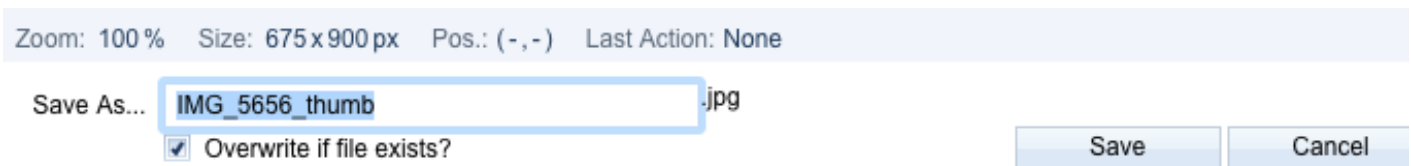

- Choose the Rotate Tool however many times as needed.

DO NOT CLICK SAVE YET!!

- At the bottom, you'll see the file name added “_thumb” after it.

- Delete the “_thumb” part to override the file
 - Otherwise you'll have the original (still incorrectly turned) and a thumb (which is correct).

It is now safe to save.

Not sure why, but sometimes the image doesn't show up at all, or the save button doesn't want to work. Either give it a few seconds, or perhaps try a different browser.
